OVERVIEW OF CURRENT SITUATION (08/12/20 0930) Source: Johns Hopkins University & Medicine <https://coronavirus.jhu.edu/map.html>

Cases / Deaths
 Worldwide: 20,412,501 / 744,311
 Nationwide: 5,163,509 / 164,994
 California: 586,470 / 10,656
 Orange County: 41,823 / 745 Source: [Orange County COVID-19 Case Counts & Testing Figures](#)

ORANGE COUNTY PUBLIC HEALTH (as of 08/12/20 1000)

Orange County COVID-19 Summary* <i>click for full details</i>	Sat 8/08/20	Sun 8/09/20	Mon 8/10/20	Tue 8/11/20	Wed 8/12/20	Thu 8/13/20	Fri 8/14/20
Cases Reported to Date	39,076	39,641	40,527	41,578	41,823		
Deaths Reported to Date	720	726	724**	734	745		
Tests Reported Today	6,873	14,665	10,659	13,839	5,917		
Cumulative Tests to Date	459,479	474,144	484,803	498,642	504,559		
<i>*Data posted is always preliminary & subject to change. More information may become available as individual case investigations are completed. LOCAL DATA MAY BE DIFFERENT FROM THE STATE WEBSITE DATA</i> **Two non-facility resident duplicated records merged							

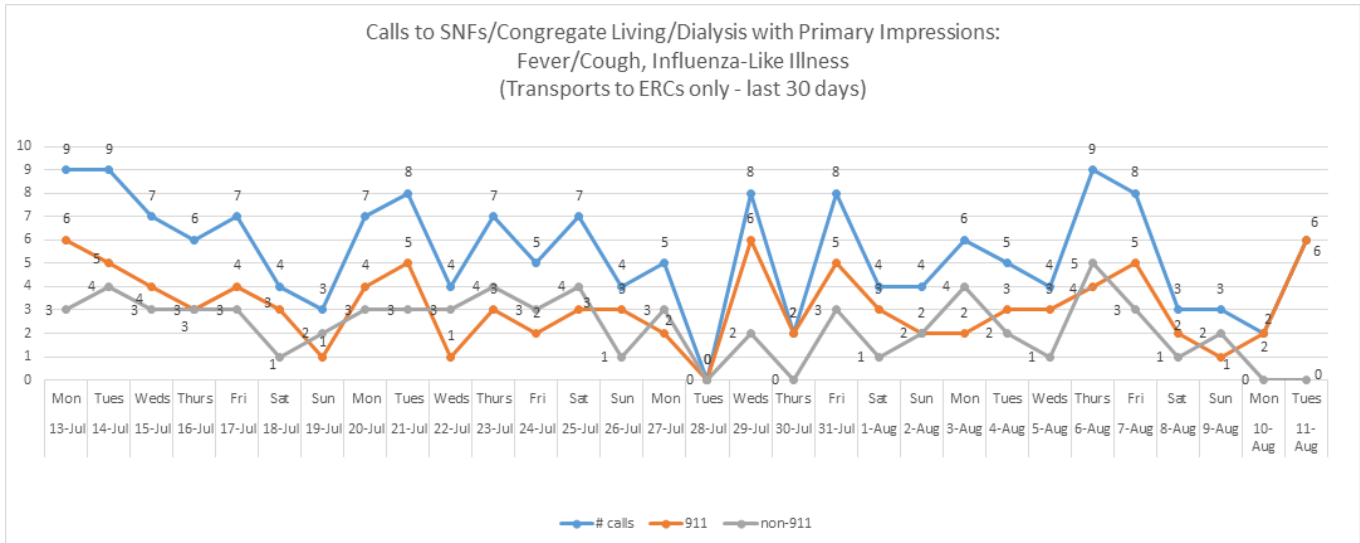

PUBLIC HEALTH REPORT (08/12/20)

- The state disease reporting system backlog was resolved over the weekend and HCA is receiving and processing the backlog of laboratory reports, positive and negative, this week. We expect to catch up from the backlog by the end of this week. This will provide more sound data to provide a better reflection of the current state of COVID in Orange County.
- Hospitalizations continue to trend downward with the most recent report being 440 COVID patients, down from 671 one month prior. Patients in the ICU is also trending down with 141 in ICU, down from 231 one month ago.
- Based on current available data, Orange County is seeing improved metrics according to State monitoring data, including;
 - Testing volume above the threshold of 150 tests per day per 100,000, currently at 190.
 - 14 day case rate at 109 cases per 100,000 down from a high of 258 on July 10; the state target is <25 per 100,000
 - Testing positivity rate at 7.7%, down from a high of 14.9% on July 13; the state target is below 8%.
- The most important actions to prevent spread and reduce disease transmission are individual behaviors by the people of OC;
 - Stay home as much as possible, especially high risk persons (65 or older, or underlying health conditions)
 - Stay home when sick
 - Isolation of cases and quarantine of all contacts (within 6 feet for 15 minutes or more)
 - Practice social distancing at all times; 6 feet or more
 - Wear face coverings when unable to maintain social distancing; high compliance is critical given asymptomatic transmission
 - Wash hands frequently
 - Avoid touching face
 - Disinfect frequently touched surfaces often

EMERGENCY MEDICAL SERVICES STATUS

*Data Source: Orange County Medical Emergency Data System (OC-MEDS)

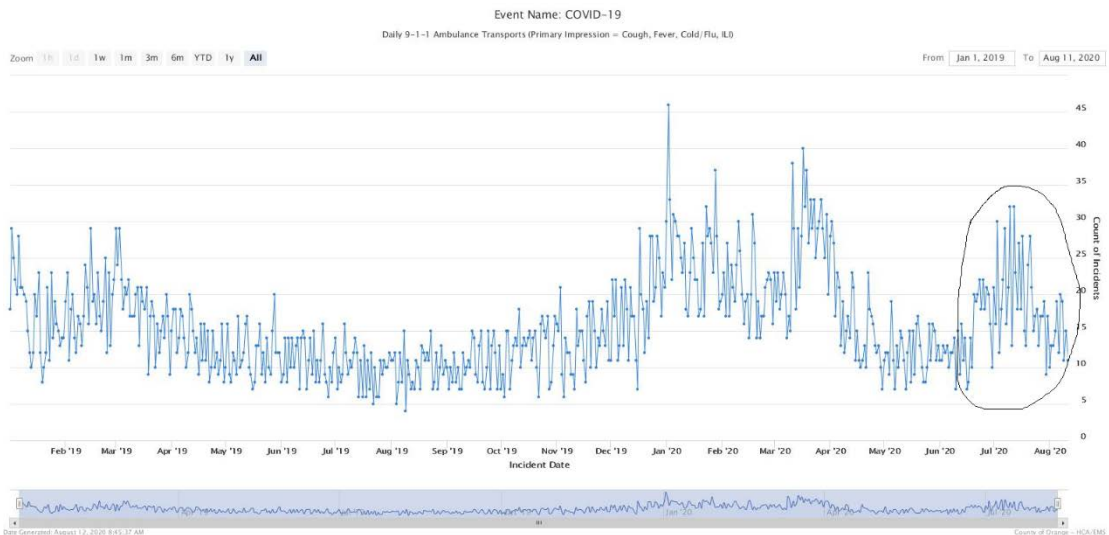

- 9-1-1 ambulance transport volume **continue to trend somewhat lower over the last couple weeks**. They are averaging about 15-20% below normal.

- Non-emergency ambulance transports have been **stable for the last few weeks**, but remain well below normal at 25-30% below normal average.

- Primary Impressions of Cold/Flu/ILI by 9-1-1 EMS providers have been **slightly above baseline levels for the last few days**.

**Orange County Emergency Medical Services
Medical Health Operational Area Coordination (MHOAC)**

Online at: <http://www.healthdisasteroc.org/ems/archive>

08/12/20

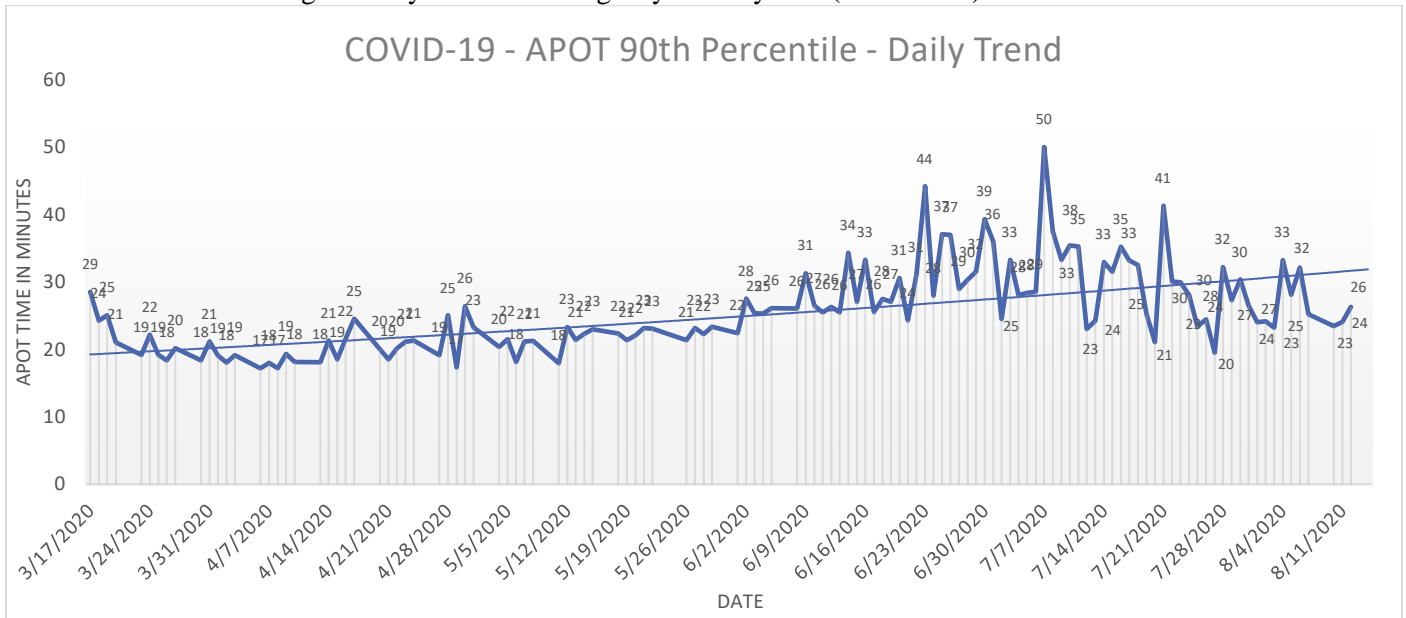

- Ambulance Patient Offload Time (APOT) is defined as the time the ambulance arrives at the receiving destination (wheels stop) to the time that the ambulance crew physically transfers the patient to the ED gurney. Last 24 hours: **Current Average APOT is: 13m24s / Current 90th Percentile APOT is: 26m35s**

The chart below displays a daily trend since the COVID-19 event began.

- Nine (9) ERCs had APOT times greater than thirty (30) minutes.
- Zero (0) ERCs had APOT times greater than sixty (60) minutes.

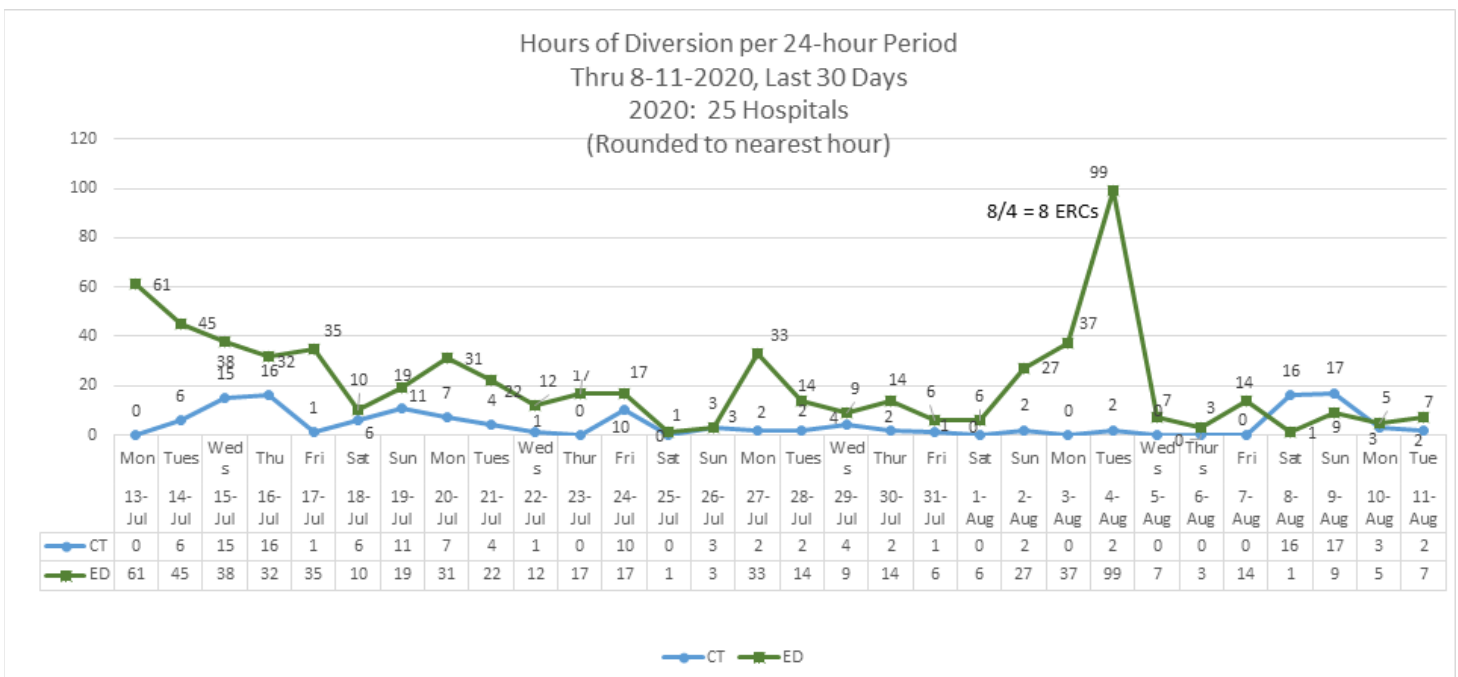

Note: a handful of ERCs were close to the 30 minute threshold, but were not over it.

*Data Source: Orange County Medical Emergency Data System (OC-MEDS)

- **Emergency Department (ED) Diversion & Computerized Tomography (CT) (ED closed to all ambulance transport due to no ED capacity or no CT available) for the last 30 days 7/13/20 – 8/11/20 below.**

Reported Operational Status Acute Care Hospitals w/ Emergency Departments			
22 / 25 Reporting	Normal Operations	Modified Operations Using Internal Corporate Resources	Modified Operations Need Assistance
	3	10	0

Reported Service Category Status Acute Care Hospitals w/ Emergency Departments (#25)		
Status Item	Yes	%
Command Center Activated	17	68%
Surge Plan Activated	16	64%
Canceled Procedures/Services	4	16%
Supply Issues	5	20%
CDPH Flex	10	40%
Increased Morgue Capacity	15	60%

- On a routine basis, the MHOAC tracks daily hospitalizations, census, occupancy and PPE availability as well as reviews epidemiologic data (doubling time).
- The criteria in the table below serve as objective measures to identify the need for hospitals to shift to crisis care strategies (i.e. activate surge plans) & uses the following assumptions:
 - Increased pressure in hospitals & on the EMS system requires a shift to crisis care strategies
 - Low levels of PPE will come earlier than decreased capacity and cause an abrupt change in capacity.
 - Increased hospitalizations and low PPE could have a synergistic effect to reduce capacity.
 - Low levels of PPE is not just a marker of capacity but causes capacity issues.

Hospital Criteria for shifting to Crisis Care Strategies LEGEND			
CRITERIA	STATUS		
	Normal Operations	Modified Operations Under Control	Modified Operations Assistance Needed
Rate of change in Hospitalized COVID-19 patients (doubling time over last 7 days)	Never to 4 weeks to double	4 weeks to 2 weeks to double	Less than 2 weeks to double
Absolute COVID-19 Census in the hospital	Less than 500	500-750	>750
Hospital census as a percentage of capacity	<80%	80% to 90%	>90%
Supply of PPE available in the hospitals	>4 weeks	2 to 4 weeks	< 2 weeks

**Orange County Emergency Medical Services
Medical Health Operational Area Coordination (MHOAC)**

Online at: <http://www.healthdisasteroc.org/ems/archive>

08/12/20

Hospital Criteria for shifting to Crisis Care Strategies			
8/11/20			
CRITERIA	STATUS		
	Normal Operations	Modified Operations Under Control	Modified Operations Assistance Needed
Rate of change in Hospitalized COVID-19 patients (doubling time over last 7 days)	100 days		
Absolute COVID-19 Census in the hospital	440		
Hospital census as a percentage of capacity	67%		
Supply of PPE available in the hospitals		2 to 4 weeks	

- It is important to note that the basis of the table is that these are concepts and criteria that we use to judge how the system is being affected by the COVID-19 pandemic. The numbers and colors given are a guideline, not a hard and fast rule. For example, if in 2 weeks our hospitalized cases go up by a factor of 1.8 to a level of 740, we will still consider that to be very concerning and would not wait until the doubling time worsens or the census tops 750.
- Hospital Surge Plans are already activated to an extent, as conditions worsen (higher COVID-19 inpatient burden, Staffing struggles, PPE concerns)
- Does this trigger a shift to crisis care strategies and an activation of surge plans?
That number is one factor. Surge plans are already activated to an extent. Increased concerns (more factors in the worrisome category) means increased amount of surge as in the next question.
- What are the surge plans and crisis care strategies that would be implemented?
-Modifying units, such as converting beds/rooms to ICUs and negative pressure rooms
-Expanded beds also includes surge tents
-Flexing nursing staffing ratios
- How was the 750-patient threshold determined?
Initial surge capacity of the hospitals was around 1000 beds. We figured that if we were getting close to that number, we need to take extra steps beyond the initial ones. Again, the exact number is not as important as the concept of stress on the system.
- All hospitals are impacted. We initially saw the highest degree of hospital burden in the hot spots of the county (Anaheim and Santa Ana), but as COVID-19 has become more widespread we are seeing the burden shift to hospitals based on their size, not just location.
