*Data posted is always preliminary & subject to change. More information may become available as individual case investigations are completed. <b>LOCAL DATA MAY BE DIFFERENT FROM THE STATE WEBSITE DATA</b>							

**COUNTY DATA MONITORING UPDATE (08/20/20)**

- August 19 was the first day that Orange County is below all of the State’s data monitoring thresholds. As a reminder, we need to maintain this status for three consecutive days in order to be removed from the County Monitoring List. If this trend continues, Orange County will be off the Monitoring list on the State website on August 22 and our projected day 15 would then be September 6. On our data dashboard, we’ve added a countdown clock to track how many days we have been off the monitoring list, which can be viewed here: <https://ochca.maps.arcgis.com/apps/opsdashboard/index.html#/cc4859c8c522496b9f21c451de2fedae>
- Based on the [K-12 Reopening Framework](#), once Orange County has been off of the monitoring list for 14 days **all in-person** instruction can resume. Once a county is off the list, we are still subject to the [Governor’s July 13<sup>th</sup> order](#) with respect to sector closures. Indoor operations shall remain closed, even when a county is removed from the County Monitoring List, until the State Health Officer modifies the Order and authorizes re-opening.

**EMERGENCY MEDICAL SERVICES STATUS**

\*Data Source: Orange County Medical Emergency Data System (OC-MEDS)

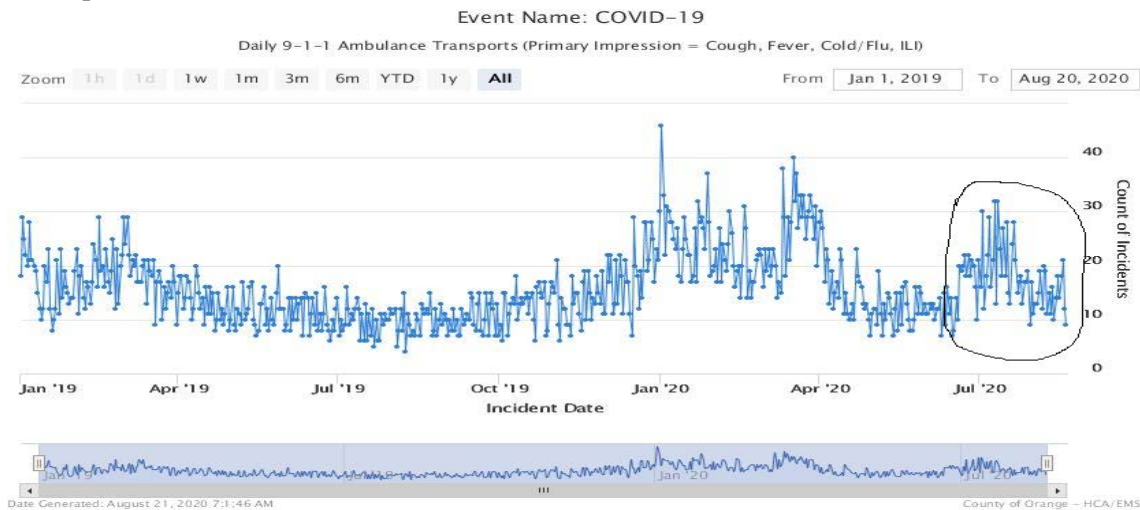

- 9-1-1 ambulance transport volume have been trending somewhat higher over the last few days. They are averaging about 15% below normal overall.

- Non-emergency ambulance transports were lower this week compared to the three previous weeks. They are averaging about 30% below normal.

- Primary Impressions of Cold/Flu/ILI by 9-1-1 EMS providers have been slightly above baseline levels for the last couple of weeks.

**Orange County Emergency Medical Services  
Medical Health Operational Area Coordination (MHOAC)**

Online at: <http://www.healthdisasteroc.org/ems/archive>

**08/21/20**

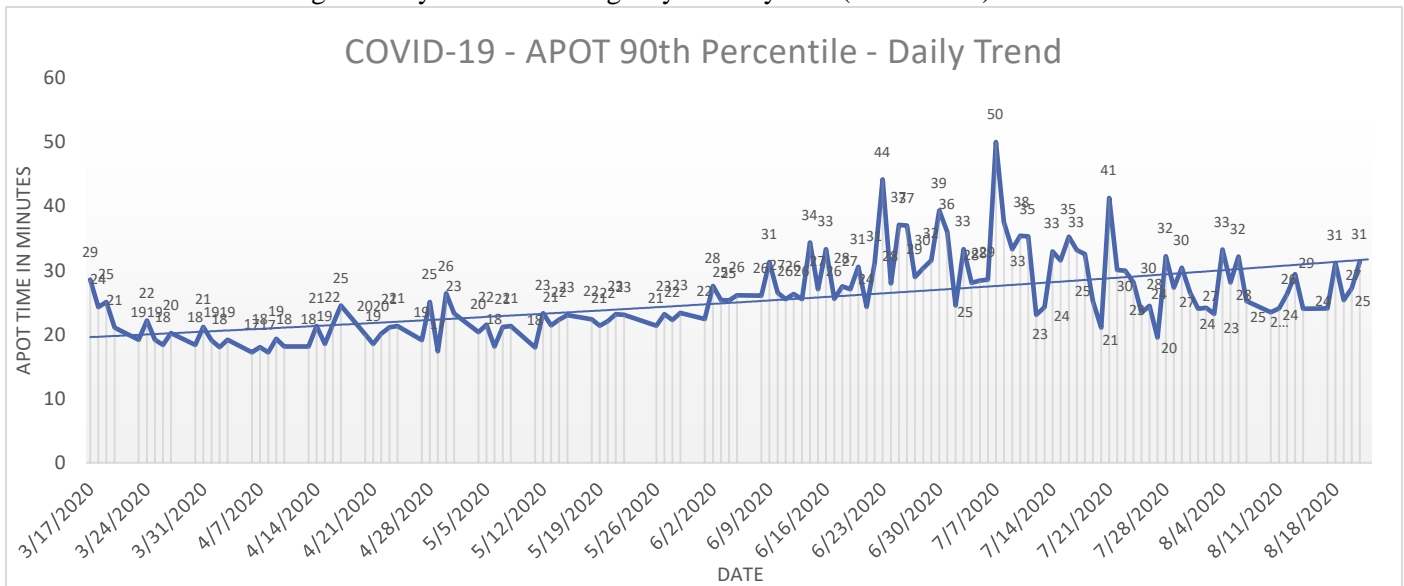

- Ambulance Patient Offload Time (APOT) is defined as the time the ambulance arrives at the receiving destination (wheels stop) to the time that the ambulance crew physically transfers the patient to the ED gurney. Last 24 hours: **Current Average APOT is: 14m06s / Current 90th Percentile APOT is: 31m42s**

The chart below displays a daily trend since the COVID-19 event began.

- Nine (9) ERCs had APOT times greater than thirty (30) minutes.
- Six (6) ERCs had APOT times greater than sixty (60) minutes.

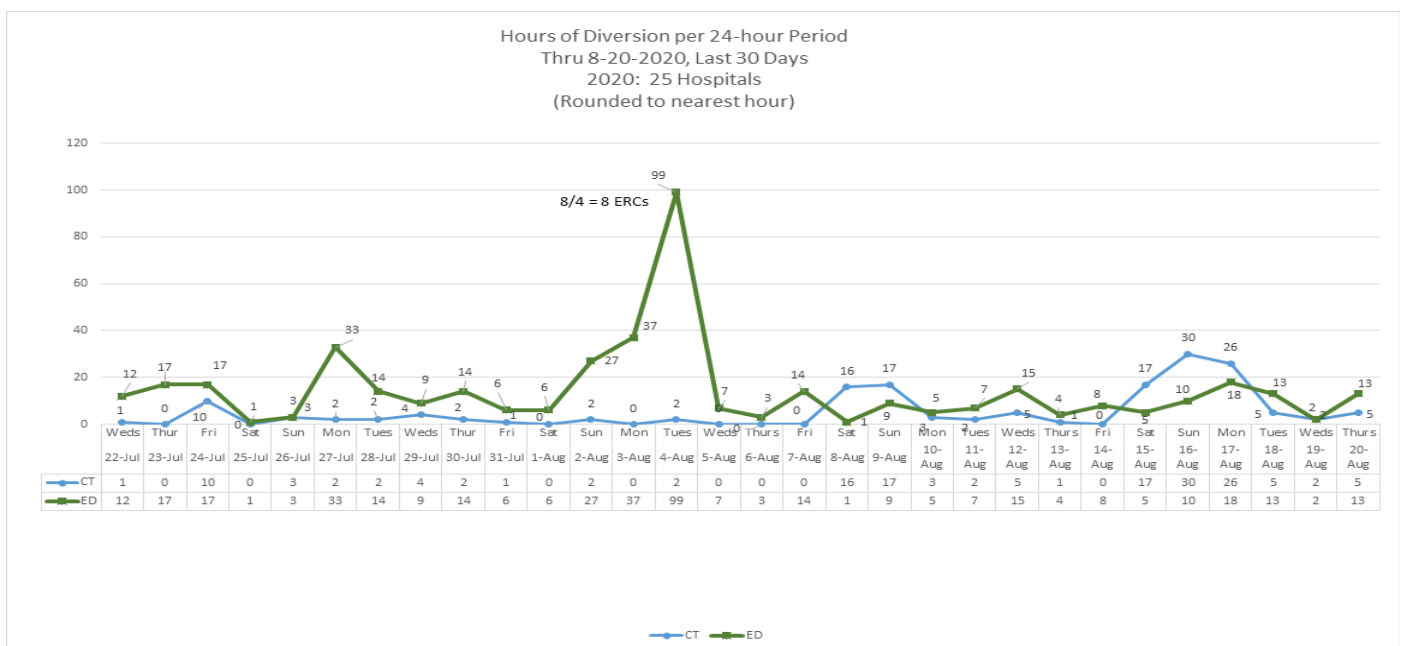

*Note: a handful of ERCs were close to the 30 minute threshold, but were not over it.*

\*Data Source: Orange County Medical Emergency Data System (OC-MEDS)

- **Emergency Department (ED) Diversion & Computerized Tomography (CT) (ED closed to all ambulance transport due to no ED capacity or no CT available) for the last 30 days 7/22/20 – 8/20/20 below.**

Reported Operational Status Acute Care Hospitals w/ Emergency Departments			
23 / 25 Reporting	Green	Yellow	Orange
	13	9	0

Reported Service Category Status Acute Care Hospitals w/ Emergency Departments (#25)		
Status Item	Yes	%
Command Center Activated	16	64%
Surge Plan Activated	15	60%
Canceled Procedures/Services	5	20%
Supply Issues	8	32%
CDPH Flex	11	44%
Increased Morgue Capacity	16	64%

- On a routine basis, the MHOAC tracks daily hospitalizations, census, occupancy and PPE availability as well as reviews epidemiologic data (doubling time).
- The criteria in the table below serve as objective measures to identify the need for hospitals to shift to crisis care strategies (i.e. activate surge plans) & uses the following assumptions:
  - Increased pressure in hospitals & on the EMS system requires a shift to crisis care strategies
  - Low levels of PPE will come earlier than decreased capacity and cause an abrupt change in capacity.
  - Increased hospitalizations and low PPE could have a synergistic effect to reduce capacity.
  - Low levels of PPE is not just a marker of capacity but causes capacity issues.

Hospital Criteria for shifting to Crisis Care Strategies LEGEND			
CRITERIA	STATUS		
	Normal Operations	Modified Operations Under Control	Modified Operations Assistance Needed
Rate of change in Hospitalized COVID-19 patients (doubling time over last 7 days)	Never to 4 weeks to double	4 weeks to 2 weeks to double	Less than 2 weeks to double
Absolute COVID-19 Census in the hospital	Less than 500	500-750	>750
Hospital census as a percentage of capacity	<80%	80% to 90%	>90%
Supply of PPE available in the hospitals	>4 weeks	2 to 4 weeks	< 2 weeks

**Orange County Emergency Medical Services  
Medical Health Operational Area Coordination (MHOAC)**

Online at: <http://www.healthdisasteroc.org/ems/archive>

**08/21/20**

<b>Hospital Criteria for shifting to Crisis Care Strategies</b>			
<b>8/21/20</b>			
<b>CRITERIA</b>	<b>STATUS</b>		
	<b>Normal Operations</b>	<b>Modified Operations Under Control</b>	<b>Modified Operations Assistance Needed</b>
Rate of change in Hospitalized COVID-19 patients (doubling time over last 7 days)	161.4 days		
Absolute COVID-19 Census in the hospital	397		
Hospital census as a percentage of capacity	71%		
Supply of PPE available in the hospitals		2 to 4 weeks	

- It is important to note that the basis of the table is that these are concepts and criteria that we use to judge how the system is being affected by the COVID-19 pandemic. The numbers and colors given are a guideline, not a hard and fast rule. For example, if in 2 weeks our hospitalized cases go up by a factor of 1.8 to a level of 740, we will still consider that to be very concerning and would not wait until the doubling time worsens or the census tops 750.
- Hospital Surge Plans are already activated to an extent, as conditions worsen (higher COVID-19 inpatient burden, Staffing struggles, PPE concerns)
- Does this trigger a shift to crisis care strategies and an activation of surge plans?  
That number is one factor. Surge plans are already activated to an extent. Increased concerns (more factors in the worrisome category) means increased amount of surge as in the next question.
- What are the surge plans and crisis care strategies that would be implemented?  
-Modifying units, such as converting beds/rooms to ICUs and negative pressure rooms  
-Expanded beds also includes surge tents  
-Flexing nursing staffing ratios
- How was the 750-patient threshold determined?  
Initial surge capacity of the hospitals was around 1000 beds. We figured that if we were getting close to that number, we need to take extra steps beyond the initial ones. Again, the exact number is not as important as the concept of stress on the system.
- All hospitals are impacted. We initially saw the highest degree of hospital burden in the hot spots of the county (Anaheim and Santa Ana), but as COVID-19 has become more widespread we are seeing the burden shift to hospitals based on their size, not just location.
